Note:

The Short list of occupational diseases includes the most reported ICD codes by all participating countries taken together. The criteria considered were:

- significant number of cases - over the reference period 2013-2016 by disease (threshold set to minimum 800 cases in the reference period),
- the total short list selected represents around 70% of the total number of occupational diseases reported in the EODS database by participating countries,
- the selected diseases are reported (as a consequence recognized as such at national level) by the majority of the participating countries.

The classification used is ICD-10.

The Short is important as it gives the availability of microdata for participating countries.
